DNSSEC lifecycle report

test6.devries.tv

Time window
: earliest → now

Generated
: 2026-04-17T08:50:07.513481+00:00

Key directory
: `/mnt/bind/keys/test6.devries.tv`

Summary

No significant activity was recorded during the reported window.

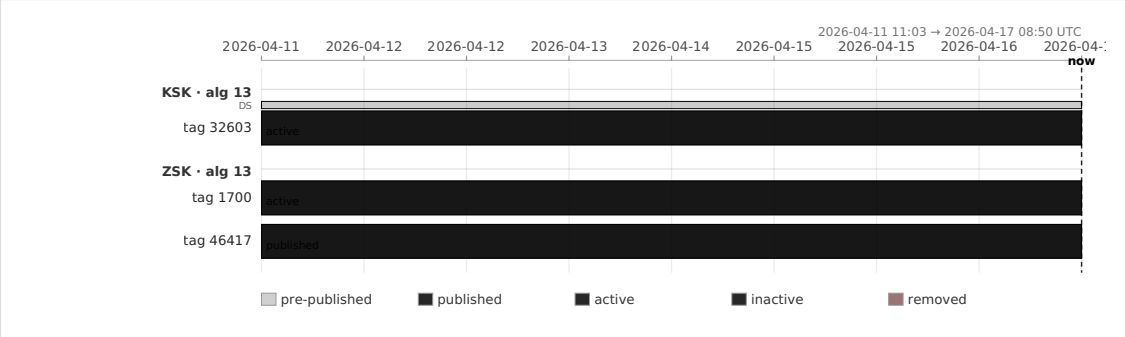
- Keys observed: 3
- Events recorded: 6
- State changes (state_file): 0
- State changes (rndc dnssec -status): 0
- DNS observations (zone + parent): 0
- iodyn-dnssec actions: 0

Key inventory

Tag	Role	Algorithm	Key id	First seen
32603	KSK	13	`Ktest6.devries.tv.+013+32603`	2026-04-11T11:03:18Z
1700	ZSK	13	`Ktest6.devries.tv.+013+01700`	2026-04-11T11:03:18Z
46417	ZSK	13	`Ktest6.devries.tv.+013+46417`	2026-04-11T11:03:18Z

Rollover view

Every observed key on a time axis, grouped by `(role, algorithm)`, with phase-coloured bars (pre-published / published / active / retired / removed). A thin DS overlay stripe above each KSK row shows when the parent-side chain of trust was actually complete, which is often when the interesting DNSSEC stories happen. If two algorithms are simultaneously active, the overlap region is highlighted behind their bars.



Calendar view

Monthly calendars covering the reported window. Each day is shaded by the number of events observed and carries a coloured dot for every event source that fired that day. Hover any day for the count and a sample of the events (live UI only).

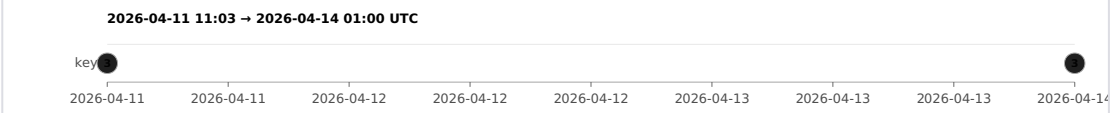
DNS event timeline

Events observed via live DNS queries and reported by `rndc dnssec -status`. Dots are coloured by source, stacked to avoid overlap, and the significant transitions are labelled inline.

No events in the reported window.

File event timeline

Changes observed directly on disk — every modification to a `K*.state` or `K*.key` file. Paired with the DNS timeline above, divergence between the two channels is usually where the interesting DNSSEC bugs live.



State machine timeline

Colour bars show each key's state-machine value over the window. Separate lanes for `GoalState`, `DNSKEYState`, `KRRSIGState`, `ZRRSIGState`, and `DSState`. The rndc view is drawn below from `rndc dnssec -status`; discrepancies between the two are where bugs and BIND quirks usually live.

No state transitions recorded in this window.

BIND's view (rndc dnssec -status)

No rndc state transitions recorded in this window.

Chronological event log

2026-04-11

01:00:06Z	key	ZSK 46417	key_timing_changed	test6.devries.tv ZSK tag=46417 Activate: 20260421000000 -> 20260428000000

Per-key breakdown

For every observed key: the current `K*.key` timings and `K*.state` fields captured at report time, plus a calendar and split DNS / File timelines limited to that key's events. KSKs naturally show their DS lifecycle at the parent because DS events are tagged by key tag at emit time.
