

DNSSEC lifecycle report

testb.devries.tv

Time window

earliest → now

Generated

2026-04-13T04:48:17.477461+00:00

Key directory

/mnt/bind/keys/testB.devries.tv

Summary

No significant activity was recorded during the reported window.

- Keys observed: 3
- Events recorded: 3
- State changes (state_file): 0
- State changes (rndc dnssec -status): 0
- DNS observations (zone + parent): 0
- iodyn-dnssec actions: 0

Key inventory

Tag	Role	Algorithm	Key id	First seen
32663	KSK	13	Ktestb.devries.tv. +013+32663	2026-04-11T11:03:18Z
9036	ZSK	13	Ktestb.devries.tv. +013+09036	2026-04-11T11:03:18Z
63299	ZSK	13	Ktestb.devries.tv. +013+63299	2026-04-11T11:03:18Z

Rollover view

Every observed key on a time axis, grouped by (role, algorithm), with phase-coloured bars (pre-publication / published / active / retired / removed). A thin DS overlay stripe above each KSK row shows when the parent-side chain of trust was actually complete, which is often when the interesting DNSSEC stories happen. If two algorithms are simultaneously active, the overlap region is highlighted behind their bars.

Calendar view

Monthly calendars covering the reported window. Each day is shaded by the number of events observed and carries a coloured dot for every event source that fired that day. Hover any day for the count and a sample of the events (live UI only).

- on-disk state
- rndc dnssec -status
- DNS probe
- K*.key timing
- iodyn / syslog

DNS event timeline

Events observed via live DNS queries and reported by `rndc dnssec -status`. Dots are coloured by source, stacked to avoid overlap, and the significant transitions are labelled inline.

No events in the reported window.

File event timeline

Changes observed directly on disk — every modification to a `K*.state` or `K*.key` file. Paired with the DNS timeline above, divergence between the two channels is usually where the interesting DNSSEC bugs live.

State machine timeline

Colour bars show each key's state-machine value over the window. Separate lanes for `GoalState`, `DNSKEYState`, `KRRSIGState`, `ZRRSIGState`, and `DSSState`. The `rndc` view is drawn below from `rndc dnssec -status`; discrepancies between the two are where bugs and BIND quirks usually live.

No state transitions recorded in this window.

BIND's view (rndc dnssec -status)

No rndc state transitions recorded in this window.

Chronological event log

2026-04-11

Time	Source	Key	Type	Summary
11:03:18Z	key	KSK 32663	key_file_observed	new K*.key for testb.devries.tv KSK tag=32663
11:03:18Z	key	ZSK 63299	key_file_observed	new K*.key for testb.devries.tv ZSK tag=63299
11:03:18Z	key	ZSK 9036	key_file_observed	new K*.key for testb.devries.tv ZSK tag=9036

Per-key breakdown

For every observed key: the current `K*.key` timings and `K*.state` fields captured at report time, plus a calendar and split DNS / File timelines limited to that key's events. KSKs naturally show their DS lifecycle at the parent because DS events are tagged by key tag at emit time.
